

This is your invitation to the

Project SENSE UPDATE

Have you heard about *Project SENSE?*

Learn more about this
on-farm research project
at the upcoming
update session.

Project SENSE (Sensors for Efficient Nitrogen Use and Stewardship of the Environment) focuses on improving the efficiency of nitrogen fertilizer use. Nebraska Extension is working directly with producers in conducting research trials on their own fields.

Project SENSE is a collaborative effort between the University of Nebraska-Lincoln, the Nebraska Corn Board, and five Natural Resources Districts (NRDs) in Nebraska, and producers participating in the Nebraska On-Farm Research Network.

Growers in attendance will see an applicator outfitted with crop canopy sensors, and how they can improve nitrogen use efficiency. Strategies which direct crop nitrogen status at early growth stages are a promising way to improve nitrogen fertilizer efficiency and improve groundwater nitrate levels.

A free noon lunch will be served.

Please preregister 2 days in
advance for meal planning
purposes. To preregister,
call 402-624-8000 or e-mail
christina.franklin@unl.edu.
