

Figure 4. Summary of weather variables: daily solar radiation, maximum and minimum temperature (Tmax and Tmin), total rainfall, and total reference grass-based evapotranspiration (ET) from **July 29 to August 11, 2015**.

Vertical bars indicate the range for these variables based on 20+ years of weather records. The horizontal black line indicates the long-term average while the red dots indicate the 2015 values. In Total Rainfall, ... indicates values extend above the plot range in those locations.
